1 Overview

Bridge Management System (BMS) stores and maintains bridges information such as Details and condition, along with their location details with respect to network. The physical attributes such as length, width, surface type, terrain and condition data such as wall type, cracking, bulging, etc., are defined and stored in BMS. The data is shared to other sub-menus of GujRAMS modules based on the requirement for performing further analysis.

The purpose of this User Manual is to guide the User through the use of the Bridge Management System (BMS) module. A detailed explanation about the tasks mentioned below is covered in this User manual.

- Recording the locations and main features of Bridges.
- Defining Bridge rules and parameters for capturing the data.
- Adding, modifying, retiring, exporting Bridge survey data.
- Calculating Bridge Condition Index.
- Generating reports.

This document is primarily developed for the Users and the Administrator of GujRAMS, who have the basic knowledge and understanding of Bridge data collection and road referencing concepts.

2 Login

GujRAMS is a User-based web application that needs a Login ID and a Password in order to get started.

For logging in:

- Click on the link provided below (Application URL).
- Login page will be opened.
- Enter the login credentials received via email.
- Enter CAPTCHA and click Login.
- User will be navigated to Home Page.

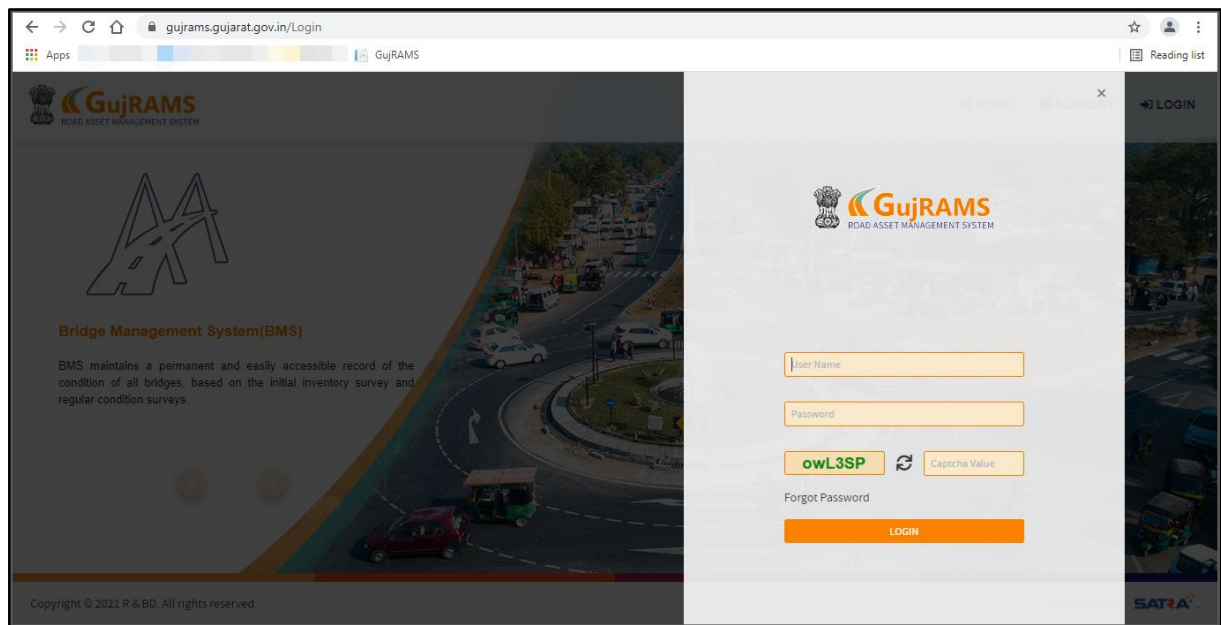

Figure 2-1: Login

Application URL: <https://gujrams.gujarat.gov.in>

Note: In case User forgets password:

1. Click on *Forgot Password*.
2. Enter the *User name*.
3. Click on *Reset button*.
4. *Reset password link will be sent to your mail Id.*
5. Click on the link and *reset the password*.

2.1 Home Page

The default Home Page for GujRAMS is Map Viewer screen with KPIs.

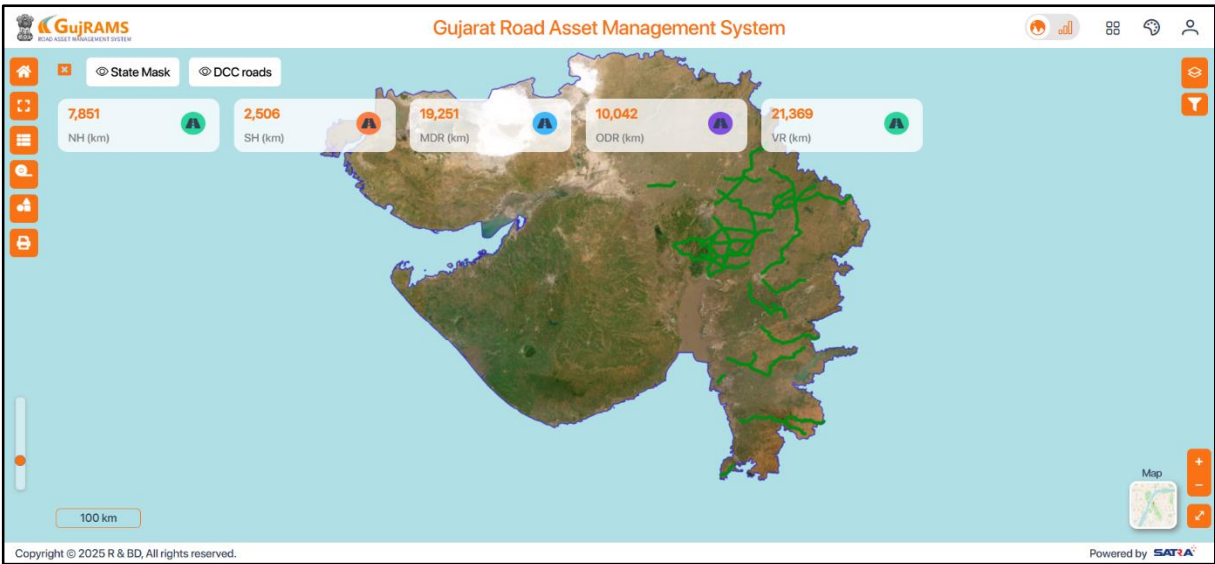

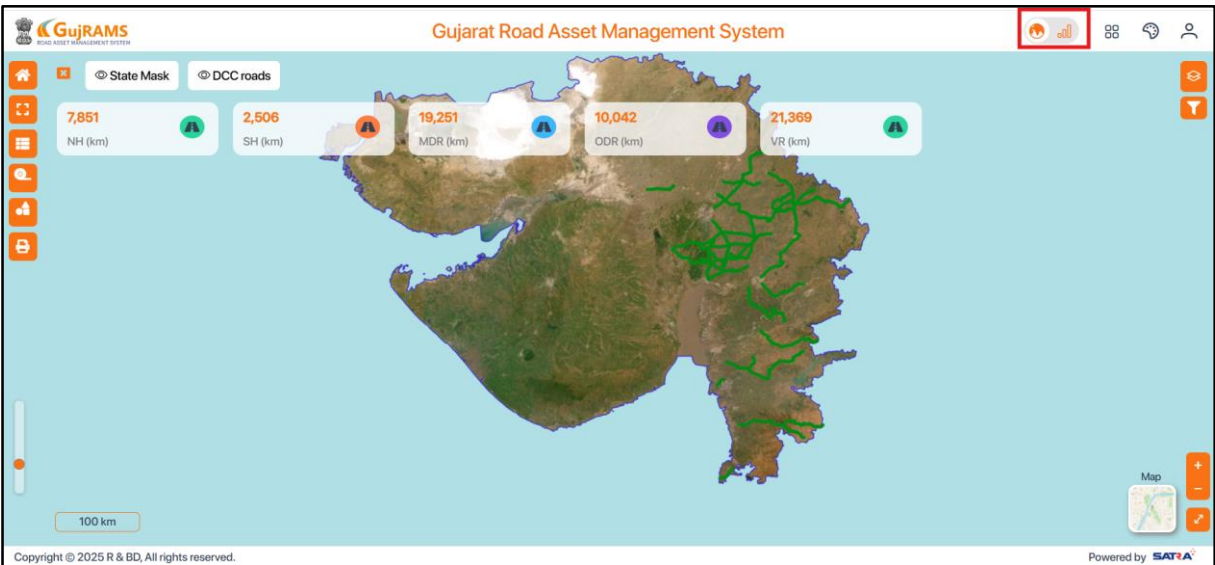

Figure 2-2: Home Page

To display Dashboard, click on Chart switch. To go back to Map view, click on the same switch.

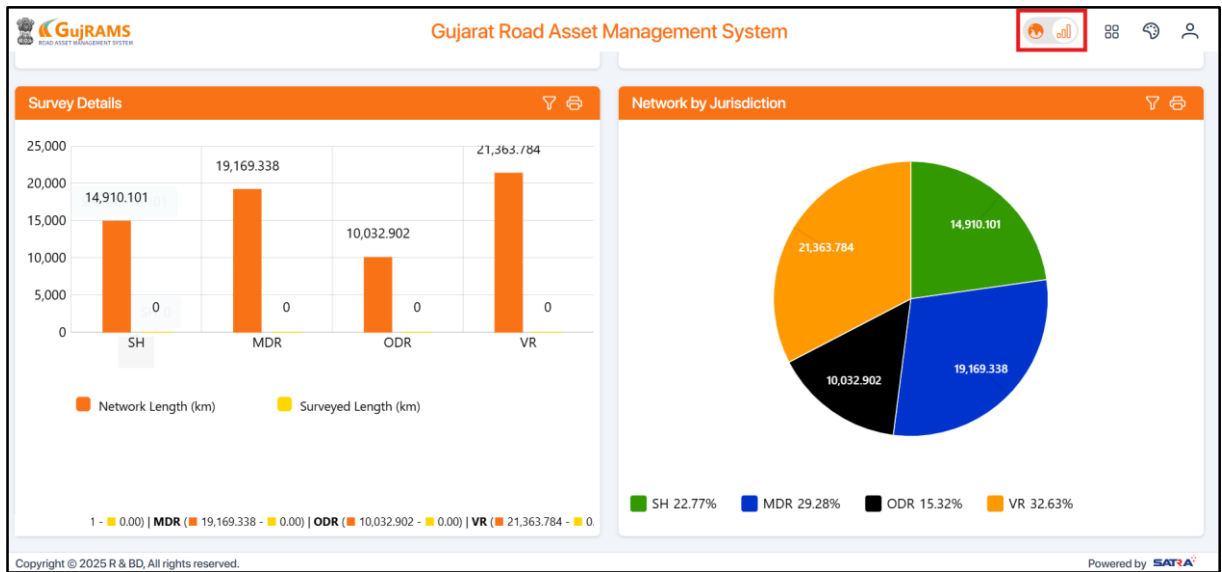

Figure 2-3: Dashboard (Map and Chart)

Note: Map View is the default display for all modules in the application. For in-depth understanding of the geographical information system (GIS) portion of the GujRAMS application and its far-reaching applicability, refer to Map Viewer user manual.

2.2 Navigate to BMS

- Click  Module Navigator icon to display modules list.
- Click  BMS icon from modules list to navigate to BMS.

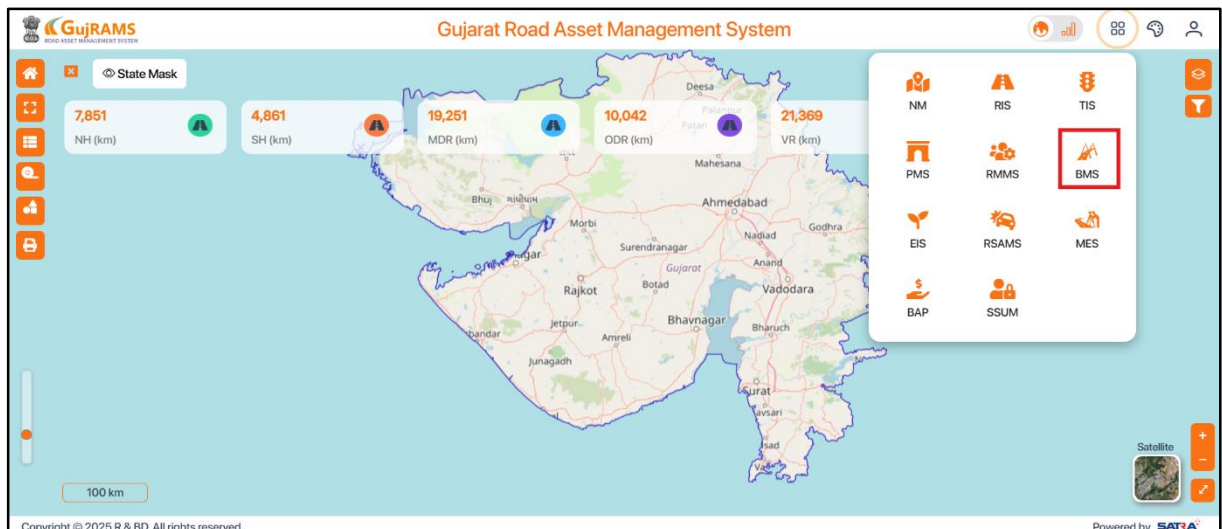

Figure 2-4: Module Navigator – BMS

2.3 Navigation Icons

The navigation icons common to all modules are given in Table 1-1.

Table 1:Navigation Icons

Navigation Path	Icon	Description	Function
All pages		Module Navigator	To navigate to modules
		Theme	To change the theme of the application
		Map Navigator	To navigate to maps
		Data Templates	To download data templates for import
		User Profiles	User profile
		Dashboard	To go back to dashboard
Data grid page		Search	To filter grid data on selected parameters
		Add	To add a new row

		Edit	To edit an existing row
		View	To View data in a form
		Delete/Retire	To delete a row
		Export	To export grid data
		Gallery	To display gallery
		Chart View	To display charts and strip maps where applicable

2.4 BMS Map View

The default Map View of BMS module displays KPIs showing the number of bridges and culverts. The pilot data shows 3000 bridges on State Highways, about 2600 bridges on Major and Other District Roads, 30 along Village Roads totalling 5635 bridges (major and minor); there are a total of 4050 culverts.

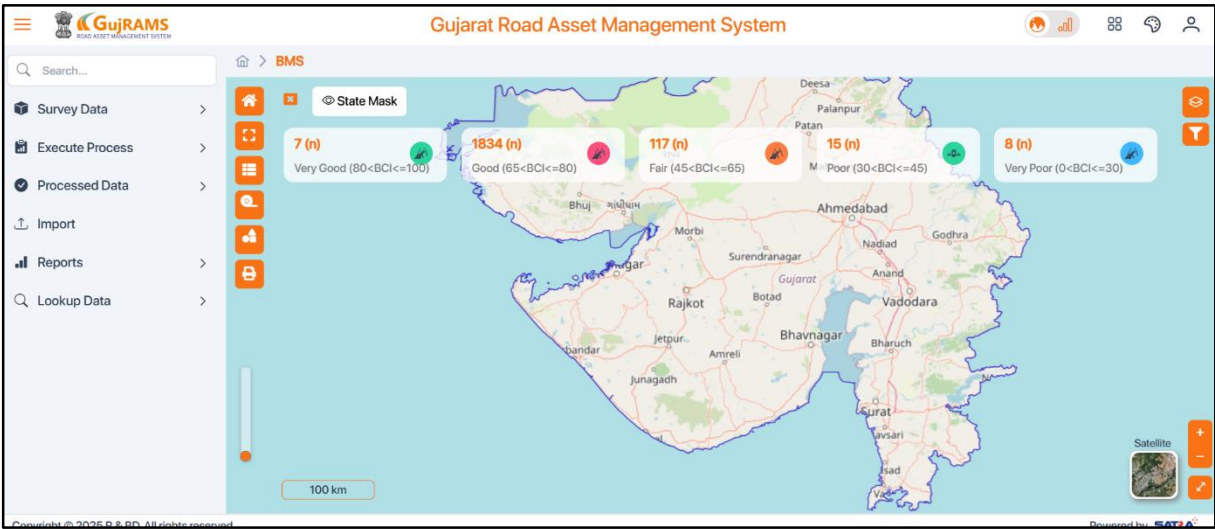

Figure 2-5: BMS Map View

2.5 BMS Dashboard

Dashboard screen of BMS represents consolidated details pertaining to Bridge Condition for the latest surveyed year and Number of Bridges under the selected jurisdiction. Bridge condition details are presented on the left and Number of Bridges on the right.

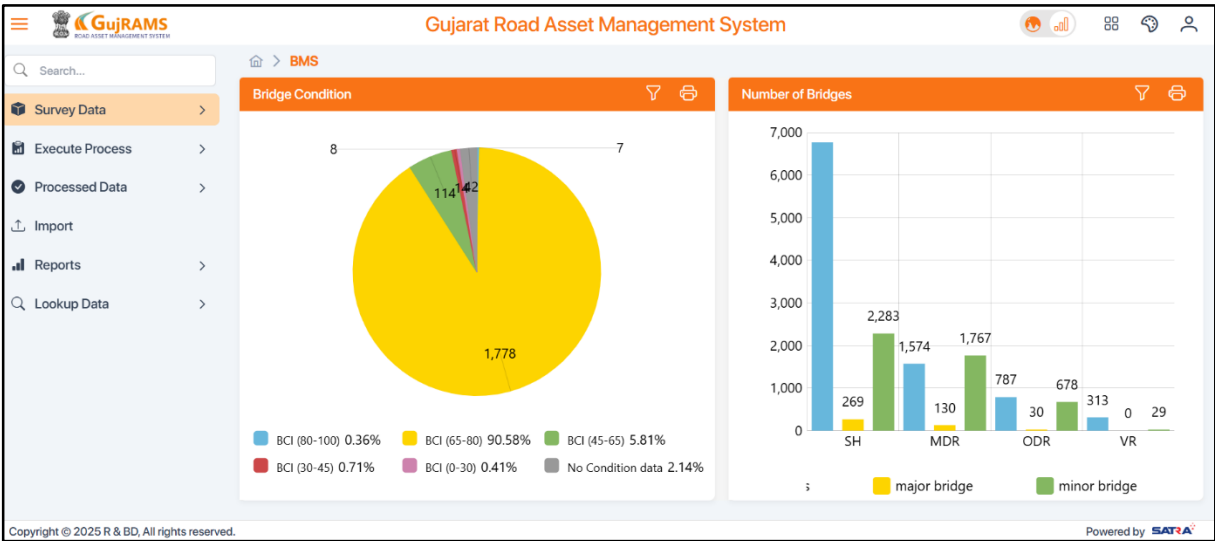

Figure 2-6: BMS Dashboard

1.1.1 Bridge Condition

The pie chart in Bridge Condition dashboard panel represents the condition of bridges using Bridge Condition Index (BCI), a useful tool for assessing the structural and functional health of a bridge.

BCI Values:
100-80 : Retained with Routine Maintenance
80-65 : Minor Repairs Required
65-45 : Moderate Repairs Required
45-30 : Requires Strengthening / Rehabilitation
< 30 : Re-construction / New Construction
Widen : IF OW < 8.0m for Minor Br. and <7.0m for Major Br.
Rep. SS : If Super-structure BECI is less than 30%

BCI ranges are mentioned defining the condition of bridge; for example, BCI 80-100 indicates that the bridge is in good condition while BCI 65-80 means the bridge requires minor repairs.

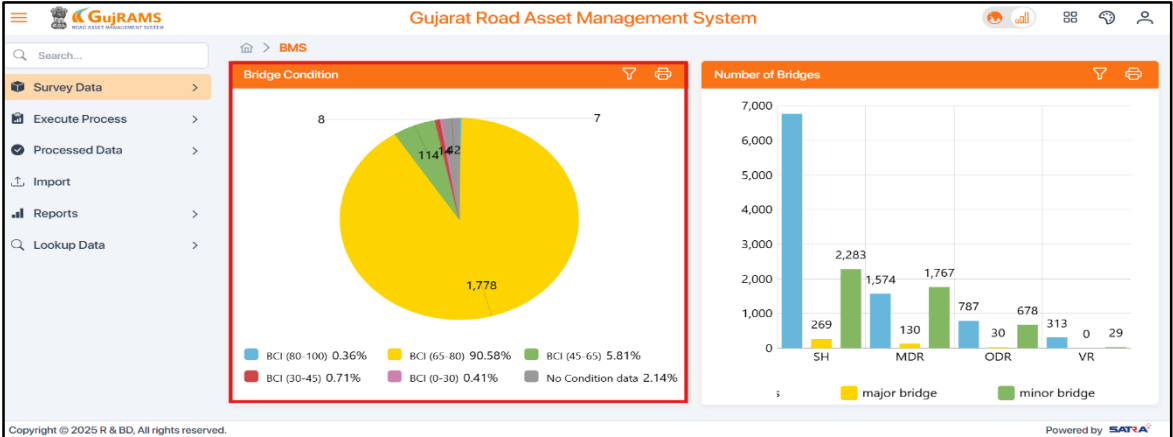

Figure 2-7: Bridge Condition chart

Representation of coloured segmented data in the pie chart is displayed as legends at the bottom of dashboard for easy identification of type of data.

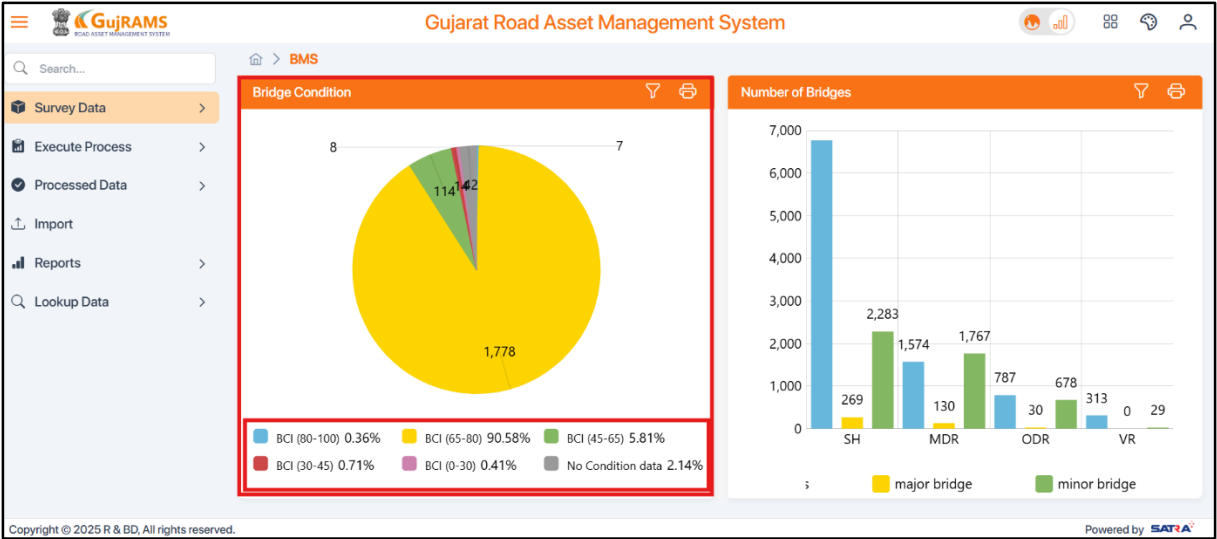

Figure 2-8: Chart legend

On mouse hover, on the pie chart, a floating opaque text-box representing corresponding data (count) of the segmented pie chart is displayed for ready reference.

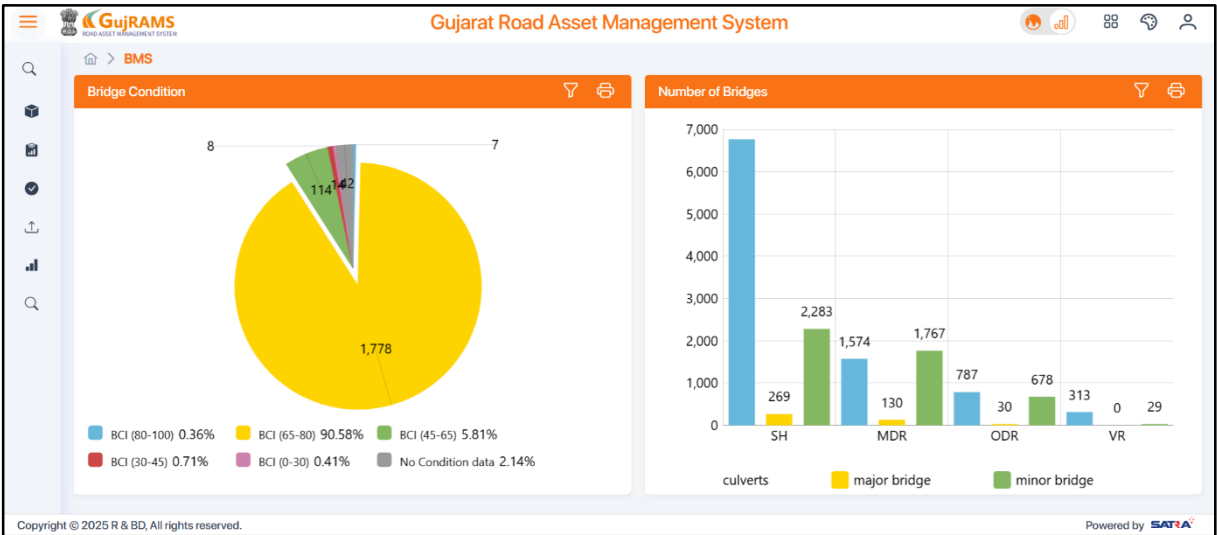

Figure 2-9: Mouse hover with Legend (show all)

Option to mute specific legend(s) can be done by clicking on colored legend box, and by doing so, the respective colored segment in the pie chart disappears; upon unchecking, the same reappears.

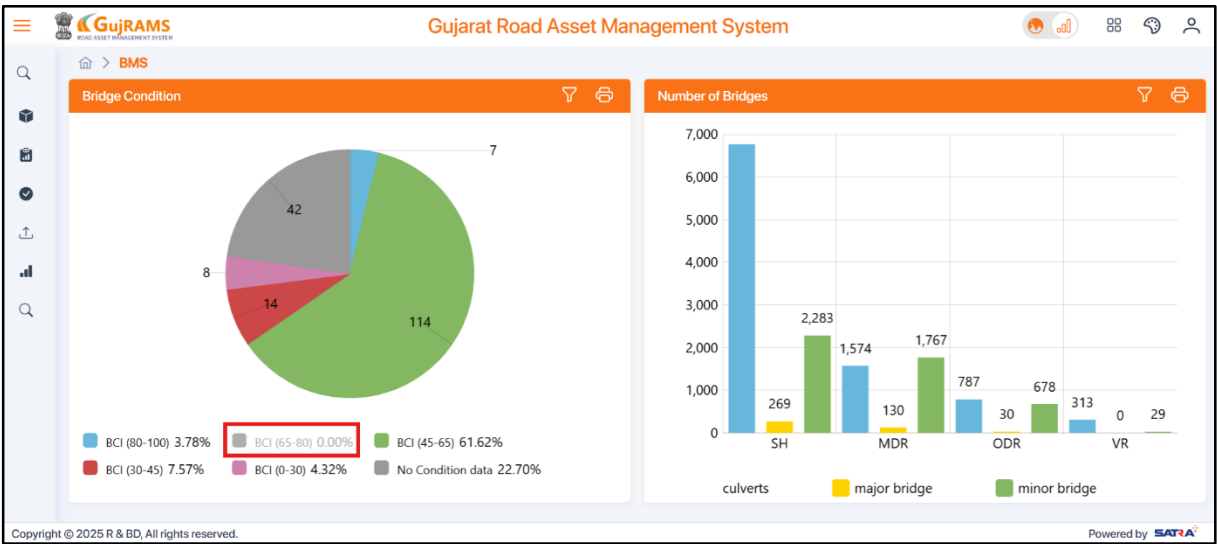

Figure 2-10: Legend (mute specific)

1.1.2 Number of Bridges

There are three types of bridges Major, Minor and Culverts based on the size of the bridge. The bar graph displays available Number of Bridges in each circle on X-axis.

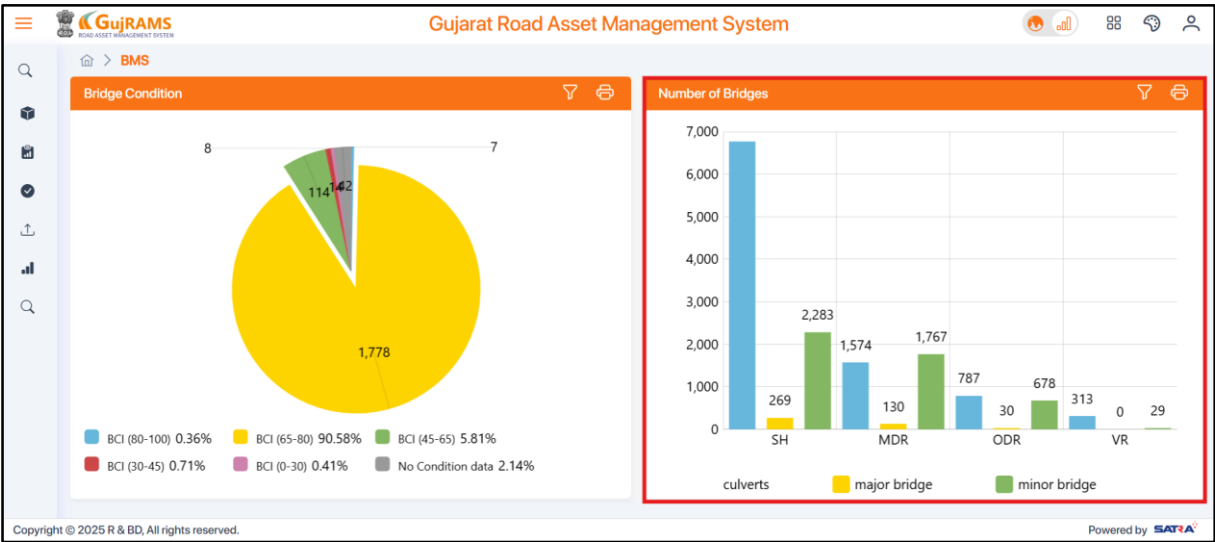

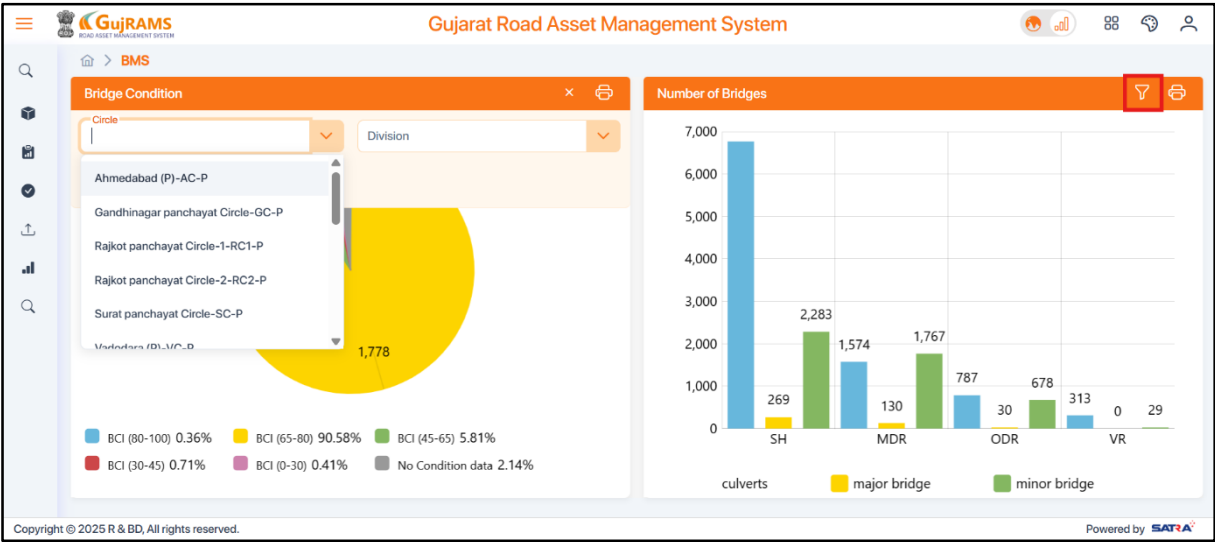

Figure 2-11: Number of Bridges chart

2.6 Filter option

Data pertaining to a specific jurisdiction and/or item (Bridge Condition and Number of Bridges) can be retrieved for viewing from the respective dropdown list, by clicking Chart Filter toggle. User can view data Circle-wise or Division-wise by selecting appropriate items in the respective dropdown list. Upon selection, relevant data is projected.

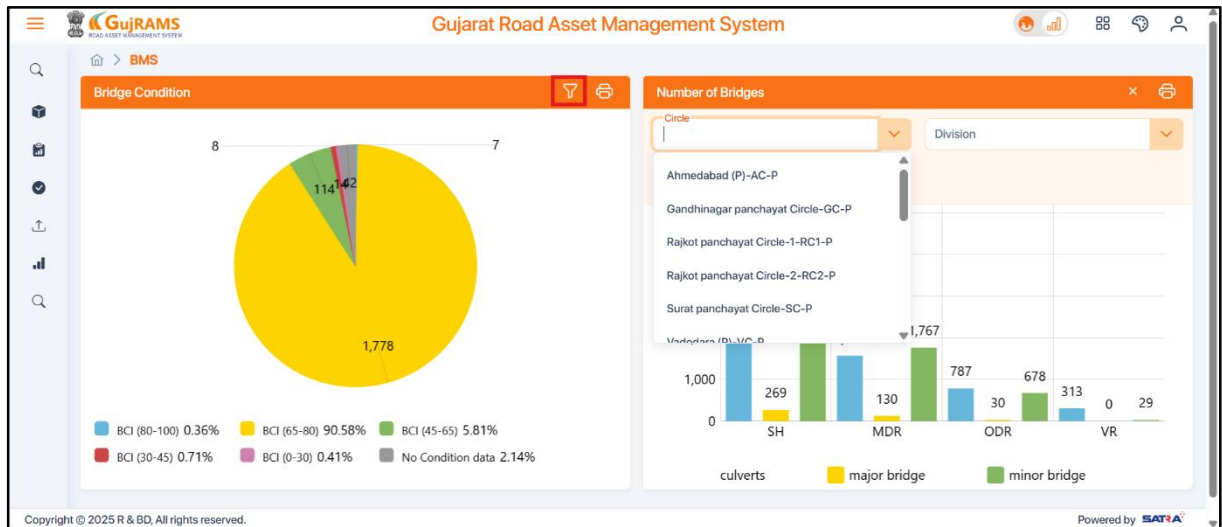

Figure 2-12: Chart Filter

2.7 Print option

- There is a print option located at the top right corner of each chart, enabling the User to take printout.

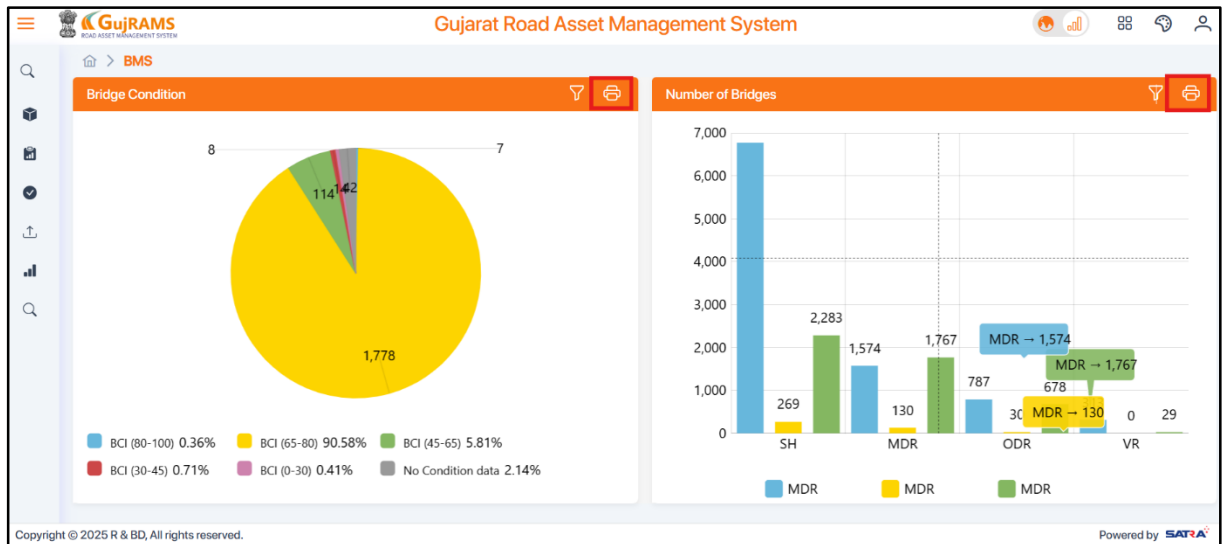

Figure 2-13: Print

2.8 Logout

To Log out of the application:

- Go to User Profiles menu.
- Click on Logout (Figure 2-14: Logout).
- User will be logged out.

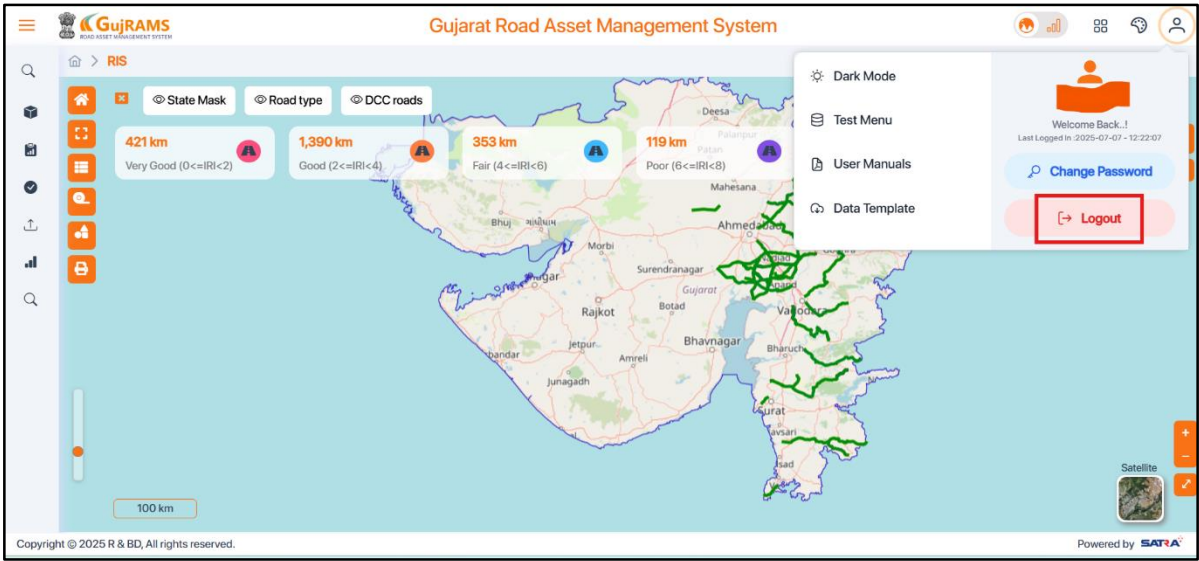

Figure 2-14: Logout

3 Survey Data

Survey Data contains Bridge Details, Abutment Details, Span Details, Bridge Condition, Span Condition, Culvert Details, Culvert Condition, and Committed Projects menus and sub-menus under it.

Based on the selection, data pertaining to the selected sub-menu will be displayed in the form of grid. By default, data pertaining to latest surveyed year will be displayed. Based on the requirement, filters can be applied on Survey year and Road code to view particular data.

The following listed functions can be performed on the Survey Data:

- Functions : Add, Edit, View, and Delete
- Filter data : Filters the data based on the selection criteria.
- Export data : Exports data into an excel file.
- Gallery : For storing and viewing Images and Documents.

Note:

- Icons related to perform the above mentioned functions in Survey Data are located at the top right corner of the screen. Please refer to Navigator tools ([Section 1.4](#)).
- Filters once set are applied on all components such as Export, Grid and Chart (for some selected types) and throughout the module until user logs out.

3.1 Search and Filter

When a submenu (for example, Bridge Details) is selected from Survey Data, data is displayed in the grid. By default, all relevant Bridge data pertaining that the user has access to will be displayed for the latest surveyed year.

User can search for a specific Road Code and/or Bridge Type, and/or Bridge Code by selecting items from the dropdown list provided.

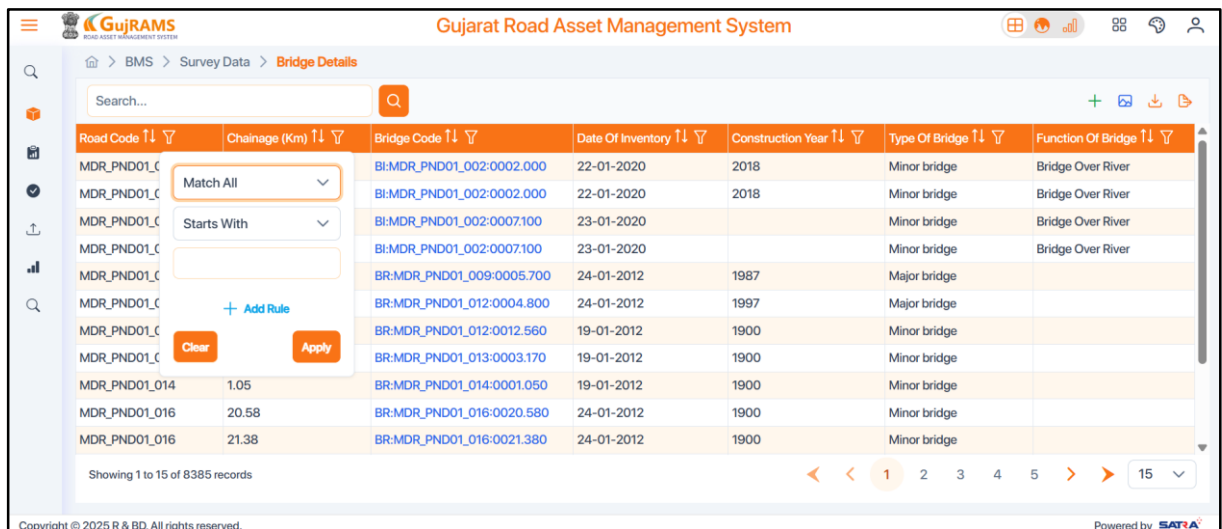

User can limit the results at jurisdiction level such as circle or division by clicking on Filter icon. Once filters are set, Road Code dropdown is limited only to the set filters.

Steps to search or filter specific data:

- Select Survey Data > Bridge Details.
- To search for particular record(s), select Road Code from the dropdown and results show up automatically.

- A filter will be available for each column in the grid, allowing users to view the desired data based on the selected filter criteria.
Match All / Match Any:
Match All: All conditions must be true.
Match Any: At least one condition must be true.
- Condition Dropdown:
Choose how to filter (e.g., Starts with, Contains, Equals).
- Input Field: Enter the value to filter (e.g., SH003).
- Add Rule: Add more filter conditions.
- Clear: Removes all filter rules and shows full data

3.2 Bridge Details

Bridge Details is considered one of the core categories in Survey Data that stores attributes related to bridge under Bridge Details such as location, bridge and Details of protection works, top deck details. Results based on search criteria and further filtering is supported by Search and Filter buttons (Refer [Section 2.1](#)). Functions such as add, edit, retire, and export data can be performed in Bridge Details.

After providing details like the road on which the bridge is located and its chainage, a Bridge Code is automatically generated by the system. Such generated bridge code forms the basis for maintaining values in other related tables.

3.2.1 Steps to Add/Edit/Retire/Export/Gallery Bridge details

- **Add**:- Navigate to Survey Data > Bridge Details.
- Click on Add icon.
- Enter the mandatory Details such as 4 tabs – Location Details, Bridge Details, and Details of protection works, top deck .Bridge code is generated by the system.
- Click Save. On successful saving, a success message will be displayed.

Road Code	Chainage (Km)	Bridge Code	Date Of Inventory	Construction Year	Type Of Bridge	Function Of Bridge

The screenshot shows the 'Bridge Details - Edit details' form in the BMS. The form is divided into several sections: Location Details, Bridge Details, and Construction Details. The Location Details section includes fields for Latitude, Longitude, R&BD Km Chainage, and Direction (Increasing/Decreasing). The Bridge Details section includes fields for Construction Year, Bridge Type (Major/Minor bridge), Category (High Level/Submersible), Bridge Support System (Simply Supported/Continuous/Cantilever), Bridge Function, Inspection Date, R&BD Structure Number, and Near By Place. The Construction Details section includes fields for Contractor, Supervise Consultant, and Design Consultant. The form is titled 'Bridge Code: BI-VR_PND01_030-0000.120' and 'Road Code: VR_PND01_030'. The inspection date is '01/01/1970'. There are buttons for 'GO TO BRIDGE INVENTORY' and 'GO'.

Figure 3-4: Survey Data > Bridge Details – Edit details

- **Gallery:** - Gallery enables the user to upload or view as well as delete already uploaded Images and Documents related to pertinent record of a Bridge Details.

The screenshot shows the 'Gujarat Road Asset Management System' interface. The 'Bridge Details' table is displayed with the following columns: Road Code, Chainage (Km), Bridge Code, Date Of Inventory, Construction Year, Type Of Bridge, and Function Of Bridge. The table contains 15 records. The first record is highlighted in orange.

Road Code	Chainage (Km)	Bridge Code	Date Of Inventory	Construction Year	Type Of Bridge	Function Of Bridge

3.3 Abutment Details

An abutment is the substructure at the ends of a bridge span or arch supporting its superstructure, which provides vertical and lateral support for the span/arch. Abutment Details contains details of abutment like bridge code, abutment number, abutment material, abutment type, foundation type, thickness of raft, wall type, side, material type, etc., categorized into different tables. There are three sub-menus in Abutment Details: Abutment Details, Foundation Abutment, and Approach Protection. Functions such as export data can be performed in Abutment Details. Results based on search criteria and further filtering is supported by Search and Filter buttons (Refer [Section 2.1](#)).

Steps to Export data for Abutment Details:

- Navigate to Survey Data > Abutment Details.
- Data grid with Abutment Details will be displayed.
- Click on Bridge Code

3.4 Pier Details

The **Pier Details** section of GujRAMS is used for maintaining detailed inventory records of piers associated with various bridges across the road network. This module enables users to view and manage key information such as the location (chainage), associated bridge codes, inventory dates, construction years, and bridge types. Results based on search criteria and further filtering is supported by Search and Filter buttons (Refer [Section 2.1](#)).

Steps to Export data for Pier Details:

- Navigate to Survey Data > Pier Details.
- Data grid with Pier Details will be displayed.
- Click on Bridge Code.

Road Code	Chainage (Km)	Bridge Code	Date Of Inventory	Construction Year	Type Of Bridge

3.5 Super Structure Inventory & Condition

The **Super Structure Inventory & Condition** screen in GujRAMS is designed for recording and viewing detailed structural data related to bridge superstructures. It helps users manage and assess the current condition and inventory of superstructures like girders, decks, and other load-bearing elements across the road network. This data is vital for maintenance planning, bridge condition assessment, and lifecycle management of infrastructure assets.

Results based on search criteria and further filtering is supported by Search and Filter buttons (Refer [Section 2.1](#)). Steps to Export data and view the gallery for super structure Inventory & condition Details are same as in Bridge details(Refer [section 3.3](#))

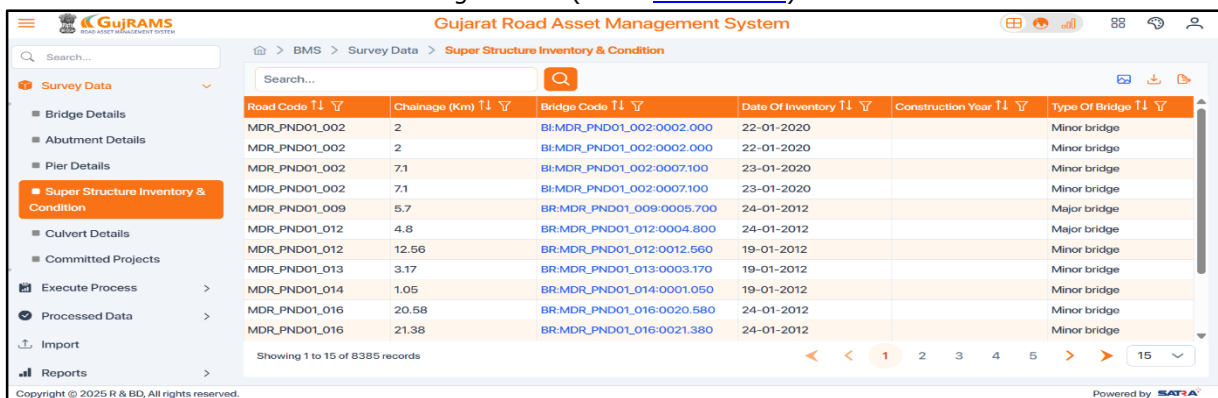

Figure 3-16:Super Structure Inventory & Condition

3.6 Culvert Details

A culvert is a small channel that allows water to flow under a road, railroad, trail, or similar obstruction from one side to the other. It is typically surrounded by soil.

The **Culvert Details** section is designed to capture and display culvert-related data along roadways. Culverts are essential for water drainage and maintaining road integrity, and this module helps in systematically managing information like their location, structure type, and associated link codes.

Road Code	Chainage	Culvert Code	Direction	Link Code	Structure Type
MDR_PND01_001	400	CI:MDR_PND01_001:0000.400	Increasing	LI:MDR_PND01_001:0000.000	Stone Arch

3.7 Committed Projects

Bridges that are already undergoing any work such as maintenance or reconstruction are not needed to be included in HDM analysis. Their work program has already been committed to; hence, they are called Committed Projects. While doing budgeting and prioritization, these Committed Projects are excluded so as to avoid duplication.

Steps to Add/Edit/View/Retire Committed Projects:

- Go to Survey Data > Committed Projects.
- Click on Add icon.
- Enter star-marked mandatory fields.
- Click on Save button.
- On successful saving, "Data saved successfully" message will be displayed.
- The added record will be displayed in the Committed Projects grid.

The figure consists of two screenshots of the Gujarat Road Asset Management System (GujRAMS) interface. The top screenshot shows the 'Committed Projects' grid with columns for Bridge Code, Link Code, Survey Year, Start Chainage (Km), End Chainage (Km), Work Name, and Work Type. The bottom screenshot shows the 'Add Committed Projects' form with fields for Survey Year, Bridge Code, Road Code, Start Chainage (m), End Chainage (m), Work Name, Work Type, Total Cost, Work Status, Current Year Bdgt, Next Year Bdgt, Start Date, and End Date.

Figure 3-23: Survey Data > Committed Projects – Add record

4 Execute Process

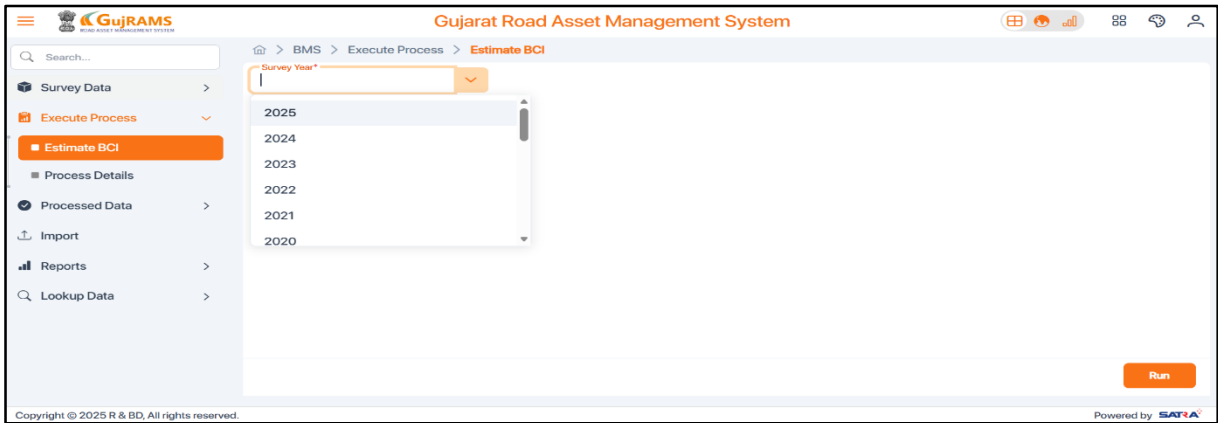

Execute Process menu is used to execute internal procedures that perform certain predefined data operations. The output of those operations can be seen in Processed Data menu.

4.1 Estimate BCI

Bridge Condition Index (BCI) process calculates condition index of bridges (BCI) and each of their elements (BECI).

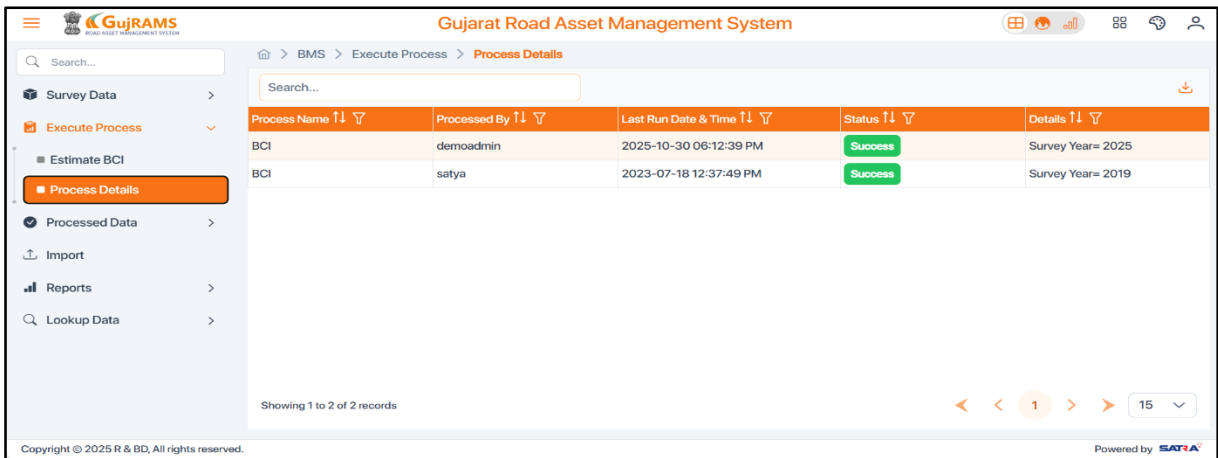

Steps to Estimate BCI:

- Select Execute Process > Estimate BCI.
- Select Survey year. This is the year to which BCI needs to be calculated.
- Click on Run button. On successful run, "BCI process completed successfully" message will be displayed.

4.2 Process Details

The processes that have been executed under Execute Process are shown here under Process Details. Process Details give details of the processes that have run, not their output.

5 Processed Data

The output of processes executed or run under Execute Process is found here in Processed Data.

5.1 BCI

It displays details of bridges and their BCI calculated by the BCI Process. Along with BCI, it shows Condition Index of each main component such as Super Structure, Foundation, Deck, Protection, etc. In addition, details of maintenance types for each main component are also shown. Repair cost is the cumulative cost of each repair to be made for each individual bridge.

User can also minimize the result set using search and filter icons provided (Refer [Section 2.1](#)). Facility to export the data is provided.

Steps to view BCI output:

- Go to Processed Data > BCI.
- Output of the Estimate BCI, which has been executed earlier, is displayed in grid.
- Use search/filter option to find a specific record.

Figure 5-3: Processed Data – BCI details

- Element-wise BCI:** Element-wise BCI gives bridge condition index for each bridge element and component. Every element is assigned an element code along with importance factor for each. Elements are graded as excellent, good, fair, or poor on the basis of the element condition.

Bridge Name	Element Code	Main Element	Component	Element Desc	Import
	E14	Protection works	Embankments	Batter Protection works	2
	E3	Super-Structure	Beams	Longitudinal Girders / Box Girders / Cross Girders	5
	E12	Deck Surface	Joints	Expansion joints	2
	E4	Foundation and Sub-Structure	Abutments	Abutment walls, Abutment Caps	4
	E2	Super-Structure	Deck	For Girder Bridges - Deck Slab	4
	E11	Deck Surface	Deck Surface	Wearing Coat	2
	E9	Foundation and Sub-Structure	Piers	Foundation Settlement, Scour	5
	E10	Foundation and Sub-Structure	Return / Wing / Retaining Walls	Walls	2

Figure 5-4: Element-wise BCI

Note: Refer Lookup Data > Element-wise Factors for all Element Codes and Importance Factors.

Element Code	Main Element	Component	Element Desc	Unit	Im. Factor
E1	Super-Structure	Deck	For RC Solid Slab, RC Box, Masonry Arch		4
E2	Super-Structure	Deck	For Girder Bridges - Deck Slab		4
E3	Super-Structure	Beams	Longitudinal Girders / Box Girders / Cross Girders		5
E4	Foundation and Sub-Structure	Abutments	Abutment walls, Abutment Caps		4
E5	Foundation and Sub-Structure	Abutments	Bearings		3
E6	Foundation and Sub-Structure	Abutments	Foundation Settlement, Scour		5
E7	Foundation and Sub-Structure	Piers	Pier Shafts, Pier Caps		4
E8	Foundation and Sub-Structure	Piers	Bearings		3
E9	Foundation and Sub-Structure	Piers	Foundation Settlement, Scour		5
E10	Foundation and Sub-Structure	Return / Wing / Retaining Walls	Walls		2
E11	Deck Surface	Deck Surface	Wearing Coat		2

Figure 5-5: Lookup Data > Element-wise Factors

- **Bridge Repair Cost:** The total cost incurred for taking up the appropriate treatment as per the condition is calculated here in Bridge Repair Cost.

Steps to calculate treatment cost:

- Click on Bridge Repair Cost tab.
- This will open a grid, which will allow adding an item to get the treatment cost for.
- Click on the "+" action button.

Update BCI

- **NDT Test:** Non-destructive testing of bridges is a method used for inspection and condition assessment of a bridge. There are several methods/techniques to do NDT.

Steps to add NDT Test details:

- Click on NDT Test tab.
- Click on Confirmation checkbox.
- In NDT Testing textbox, enter the method of test.
- Enter Testing Year and select Date of Test.
- Choose NDT report (PDF file).
- Click on Update button, and upon doing so, a success message will be displayed. The uploaded file will become available as hyperlink for viewing. Click on the PDF hyperlink to view the report in a new tab.

6 Import

- Import enables the User to import bulk data into the application using the import functionality by clicking on Import menu.

Key points in Import data:

- MS Excel (*.xlsx) file format supports imports.
- Data is imported for the selected table.
- Data needs to be organized as per the system prescribed template (Format) before importing. Refer [Section 5.2](#) to download template.
- Survey Year parameter is to be selected while importing. This is to tag imported data with the selected year; for example, 2020.

6.1 Import Summary

- Import summary screen displays details of the previous import instances such as table to which import is made, Excel file and sheet used for import, date and time of import, etc. Import status of the data such as approved/ rejected is also maintained in this screen. User can open Import summary screen by clicking on Import menu from left panel.

File name	Sheet name	Table name	Instance name

Figure 6-1: Import Summary

Import Summary details:

• Column Name/ Caption	• Description
• Import ID	• A system generated unique ID for every import that is done.
• File Name	• The file that has been uploaded. •
• Sheet Name	• The sheet having the data to be imported.
• Table Name	• Name of the table for which data has been imported. •
• Instance Name	• Provides the name of the instance
• Import Status	• Whether the import is success or failure.
• Errors (No.)	• Displays the error when invalid entries are made in imported sheet and also the number of errors.
• Imported by	• Shows the user who had imported the data •
• Start & End date & time	• Shows the date and time of the import process

Table 6-1: Import Summary details

6.2 Import Templates

Figure 6-3: Data Templates icon

- Click on Download icon displayed on BMS module template.

Figure 6-4: Download Import Templates

- Downloaded template will be stored on User's system.
- Copy the Bridge Details data to be imported into the format provided.

Key points to note:

- Every sheet in template is named similar to table name. Data needs to be copied to that sheet without altering the field names and its order.
- There is a reference sheet for each table name "tablename-ref." This shows structure of the table along with its data types, lookup data, and its key values (codes) to be used while importing.
- For example, Expansion Joints Type codes are as per below table. Users are required to use codes only instead of the description while importing.

Code	Description
1	Filler
2	Finger
3	Strip seal
4	Modular
5	Compression
6	Not Available
7	Not Visible
8	APL
9	Oth

6.3 Import Process

- Click on Import on the left-hand side panel.
- Summary tab opens with details of previous imports such as Sheet Name, imported by, Import start date and time, and its status (Success/Failed), Errors, etc.
- Click on New Import button.

Figure 6-5: Import (Summary)

- Select Table name from the dropdown list; if the file is already uploaded, click Existing File option and select the file from the Choose File dropdown.

Table Name*

☐ Existing File ☒ New File

Upload File:*

Choose File No file chosen Upload

Sheet Name*

Survey year*

Import

Figure 6-6: Import (Source)

- Select the sheet that has data to import and select the survey year from the dropdown list.
- Click Import.

- Click New File option if import file is not uploaded earlier. Browse the file from your local drive and click Upload in order to upload it to the server; once uploaded, it can be used as many times as needed for import.
- Choose Update duplicates or Ignore duplicates.

The screenshot shows the 'New Import' form in the Gujarat Road Asset Management System. The form has a sidebar on the left with navigation icons. The main content area contains the following fields and controls:

- Table Name***: A dropdown menu.
- Existing File** and **New File**: Radio buttons.
- Upload File:***: A section containing a **Choose File** button, the text 'No file chosen', and an **Upload** button.
- Sheet Name***: A dropdown menu.
- Survey year***: A dropdown menu.
- Import**: An orange button at the bottom right.

Figure 6-8: Import Success

6.4 Error Log

- Import status can be found from Summary screen.
1. Navigate to Import Summary screen.
 2. Search for details of previously run import instance.
 3. Check the import status under Import Status column.
 4. Error count is displayed under Error(s) column. Click on the count to get error description and data row no.

Row No	Error Message
276	Data Type Mismatch at column: ApprProtnLngofWall. It should be decimal
470	Side does not exist
340	Duplicate record is found in Excel on BridgeCode, SpanNo, Side, AbutmentNumber: BR:MDR_PND09_003:0003.2001LHSA1
543	SpanNo does not belong to BridgeCode BR:MDR_PND14_002:0003.800

Figure 6-9: Error Log

Note: Error list is displayed in a new tab of the browser.

Possible Errors:

- **Road Code is mandatory:** This error occurs when the Road Code in the Excel sheet of selected file is blank. Open the file and go to Row No. shown in the error log. Now enter the Road Code column, re-upload the corrected data file, and repeat the import data steps as mentioned above.
- **Duplicate Chainage found:** This error occurs when the same Road Chainage value is repeated more than once in data file. Correct the Chainage in that row or delete the duplicate rows from the data file, re-upload the corrected data file, and repeat the import data steps as mentioned above.

- **Road Code does not exist:** This error occurs when the Road Code is not found in the Road Details table (e.g. Roads, Links and LRP'S etc.) defined in NM module. Check and correct the Road Code in the data file and re-upload the corrected data file, and repeat the import data steps as mentioned above (or) Contact the System Admin (if logged in, the User does not have access to NM module) to create a new Road Code in Master Road List of the NM Module.
- **Chainage is mandatory:** This error occurs when the start and end Chainage values are either blank or null in a particular row of import file. Enter the Chainage value for that row, re-upload the corrected data file, and repeat the import data steps as mentioned above.
- **Data Type mismatch at Column; should be Integer:** This error occurs when the uploaded data file field data type is mismatching with the destination field data type (or) wrong field mapping is done in the source-destination files mapping. Cross check the source destination mapping fields or try to change/correct the data of the field displayed in the error log in the data file, re-upload the corrected data file, and repeat the import data steps as mentioned above.
- **An unknown error occurred. Please upload again:** This is a rare error which occurs when either the database or network or User is disconnected. You may wait for some time to login again and repeat the import data steps or please contact the System Admin.

7 Reports

- Processed data can be shown in the form of reports under Reports menu. BMS module has multiple reports in the form of RDLC (Crystal) reports that can be viewed and exported as PDF or Excel.

7.1 List of Reports

Group Name	Report Name
Culverts	C01: Culvert Details Details
	C02: Culvert Condition
Bridge Details	BI01: Bridge Details Details
	BI02: Bridge Details by Spans
Bridge Condition	BC01: Bridge Condition by Spans
	BC02: BCI Detailed Report
	BC03: BCI Summary Report
Others	BOII(A): Category-wise Road Type Structure Summary
	BOF2: Category-wise Road Type Structure Details

Table 7-1: Reports list

Note: Each report has a unique identifier number related to a specific report; for example, BI01 for Bridge Details report.

Steps to generate BI01 – Bridge Details report:

- Go to Reports.
- Select Bridge Details > BI01 – Bridge Details.
- A screen with report parameters will be displayed.
- Enter Jurisdiction to minimise the result and Bridge Code if data is needed for a specific bridge.
- Click View Report.
- Details Report will be displayed, which can be exported to an Excel or PDF.

BI01: Bridge Inventory Details

Circle: Gandhinagar panchayat Circle, Bridge Code: ALL

General information:

Bridge code:	BI:MDR_PND01_002:0002.000		
Road code:	MDR_PND01_002	Road name:	Moti Adaraj Titode Serthe Road
Link code:	LI:MDR_PND01_002:0000.000	Chainage(m):	2000
Direction:	Increasing	Survey date:	22-01-2020

Inventory :

Bridge type:	Minor bridge	Bridge category:	High Level
River name:	Narmada canal	Function of bridge:	1
No of spans:	2	Bridge length (m):	12.600
Span arrangement:	2*6.3	Total road width (m):	13.600

Copyright © 2021 R & BD. All rights reserved. Developed by SATRA

Figure 7-1: Bridge Details > BI01 – Bridge Details

Note:

1. Follow the same process for the other report available in BMS.
2. Refer [Annexure B](#) for output of all reports.

8 Lookup Data

- Before initiating any activity in BMS, it must be ensured that Lookup data is updated. GujRAMS has updated Lookups with information that is available or collected at the time of implementation. However, User can change it at any time with respect to the current business needs.
- While updating lookups, special care must be taken to ensure that survey or processed data that is already existing in the system should not get affected as inaccurate entries will adversely affect the output or the results. User can Add, Update, View, Delete, and Export Lookup Data.

8.1 Lookup Data list

Sl. No	Lookup Data	Description
1.	Element Condition Rating	It enables to define the rating of Bridge condition
2.	Element-wise Factors	Defines structural elements and their respective factors
3.	BOQ Unit Rates	To define Bill of Quantity (BOQ) unit rates for each identified work
4.	BOQ Master List	Provides list of actionable items to be performed
5.	Condition Extent	Categories defects based on intensity
6.	Condition Severity	Prioritizes actions based on deteriorating condition

Table 8-1: Lookup Data

- Steps to Add/Edit/View/Delete/Export Lookup Data for Condition Severity:
 - Go to Lookup Data.
 - Select Condition Severity.
 - Click on Add icon.
 - Enter Condition Ratings for Cond code, Grade, Excellent, Good etc.,

Bridge Management System (BMS)

- Click on Save button. Upon successful saving, “Added successfully” message will be displayed.
- The added record will be displayed in Lookup Data Road Category.

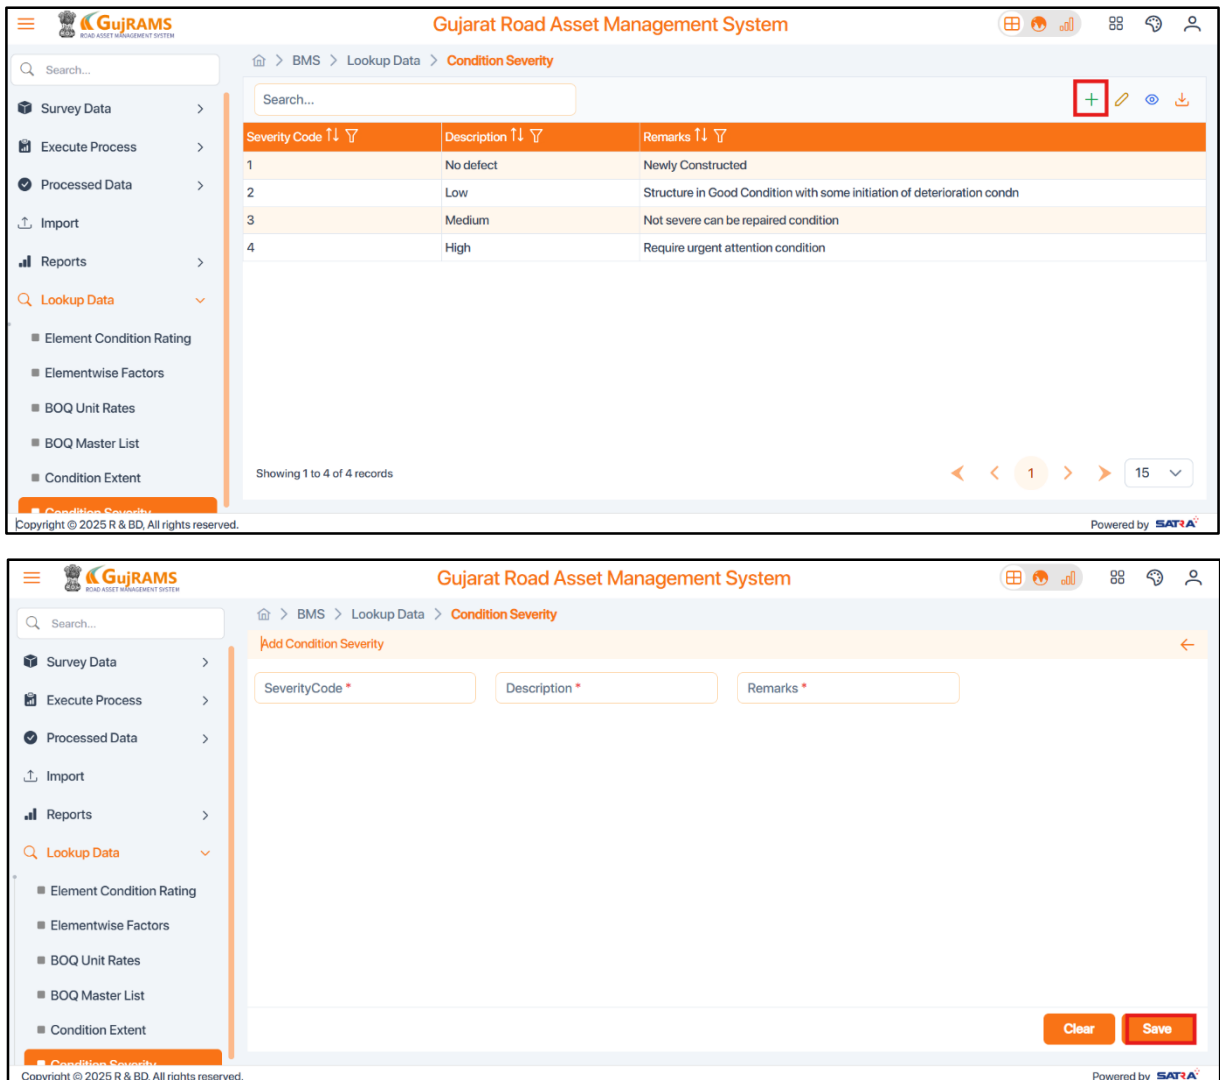

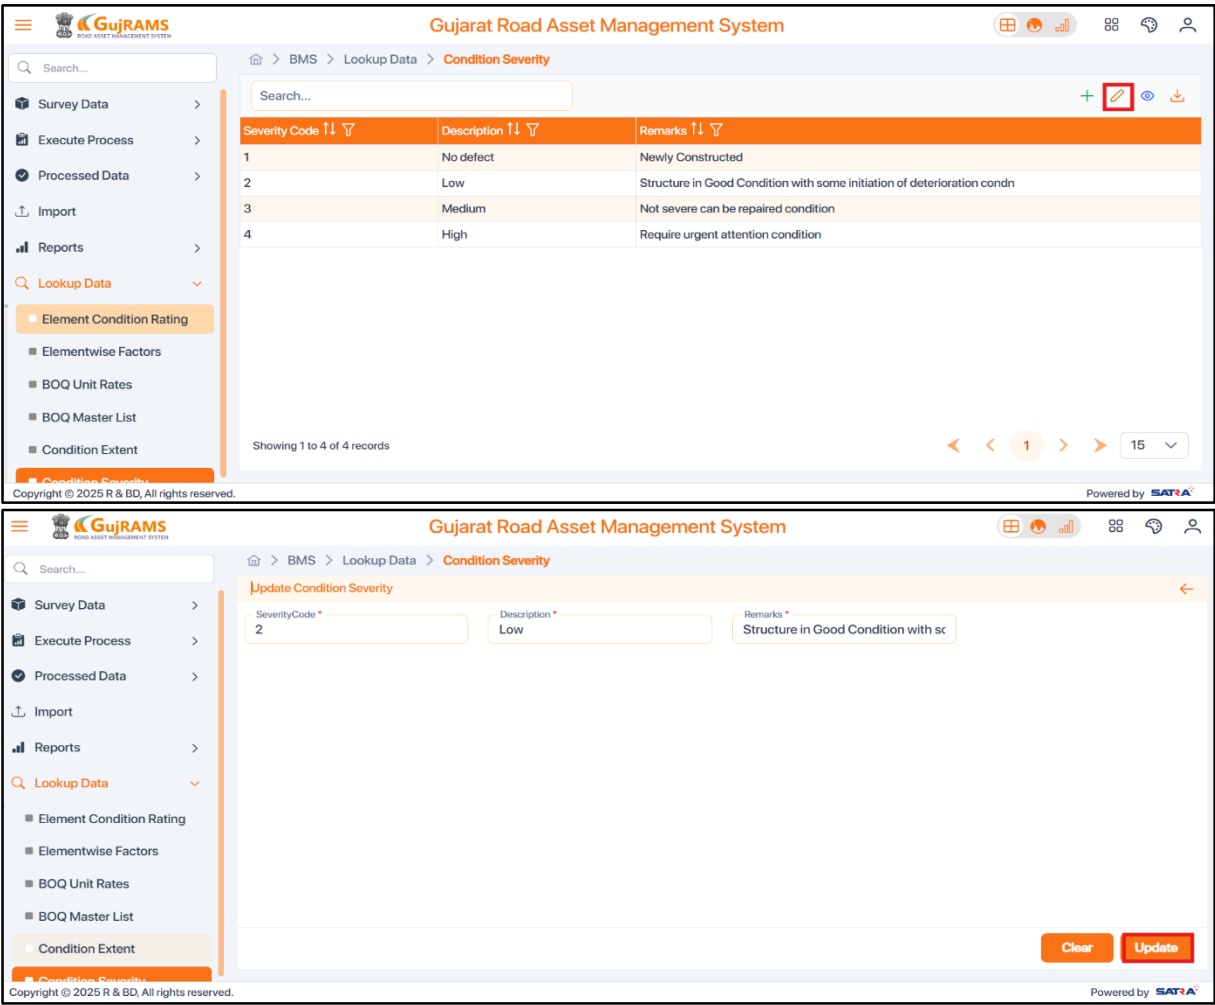

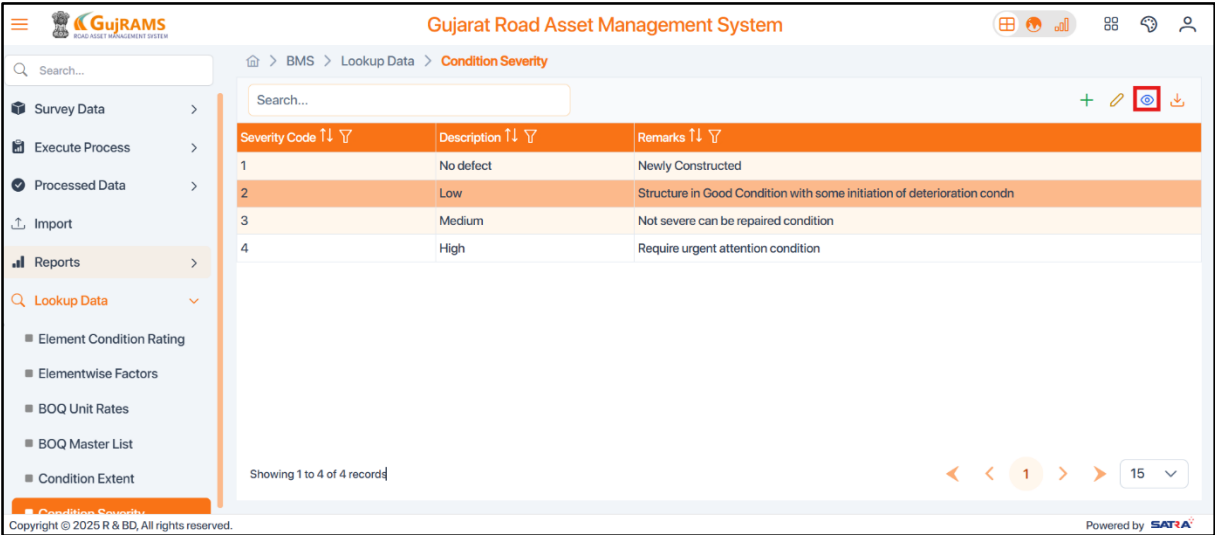

Figure 8-1: Lookup Data – Condition Severity Add lookup

- To edit, select a record and click on Edit icon. After making necessary changes, click on Update button; upon successful editing, “Updated successfully” message will be displayed.

8. To View a Condition Severity lookup, select and click on View icon.

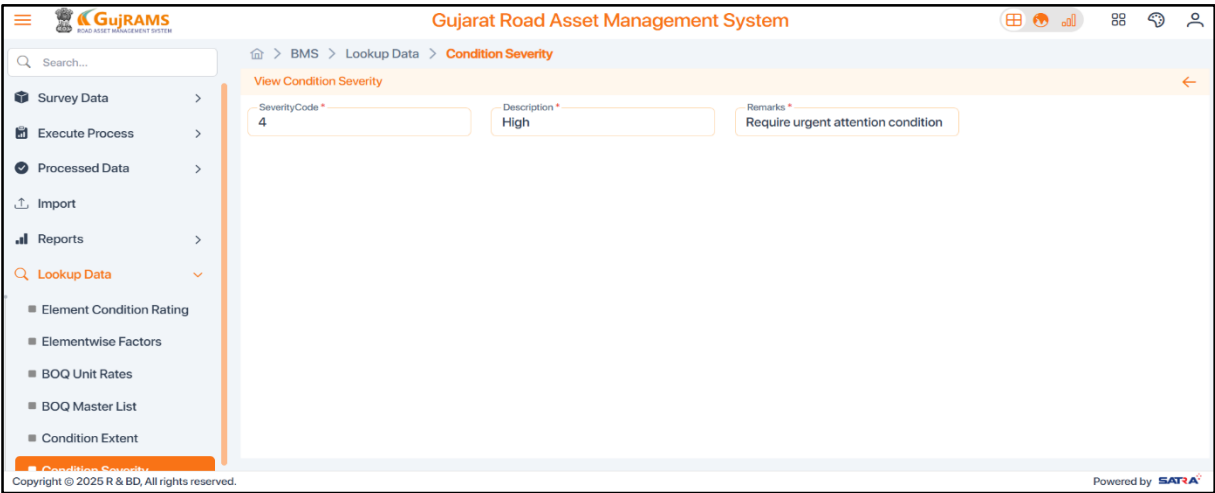

Figure 8-3: Lookup Data – Condition Severity View lookup

9. To export Condition Severity data, click Export icon. An Excel file is downloaded into your system.

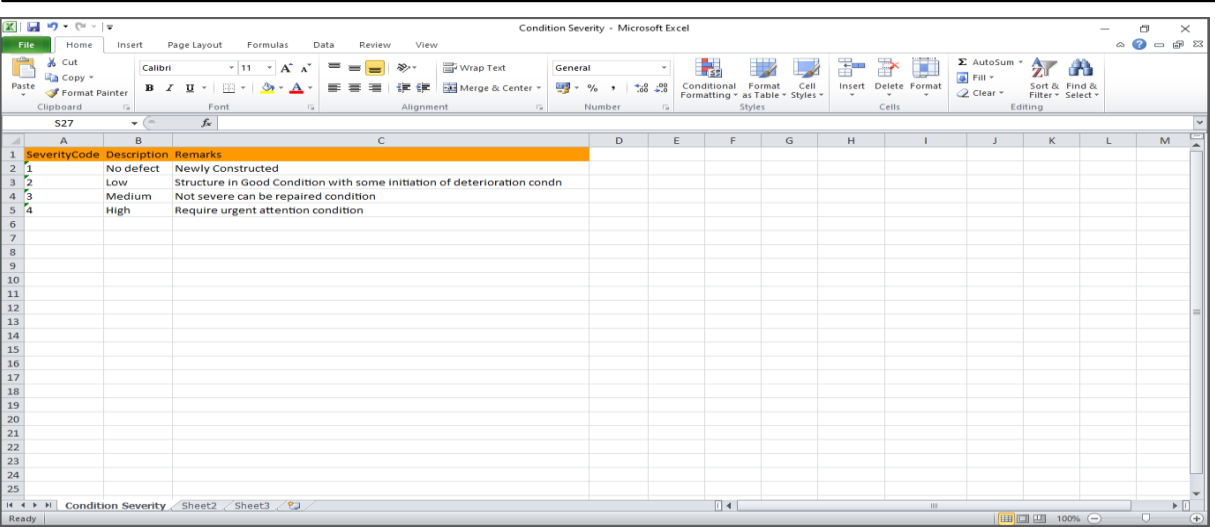

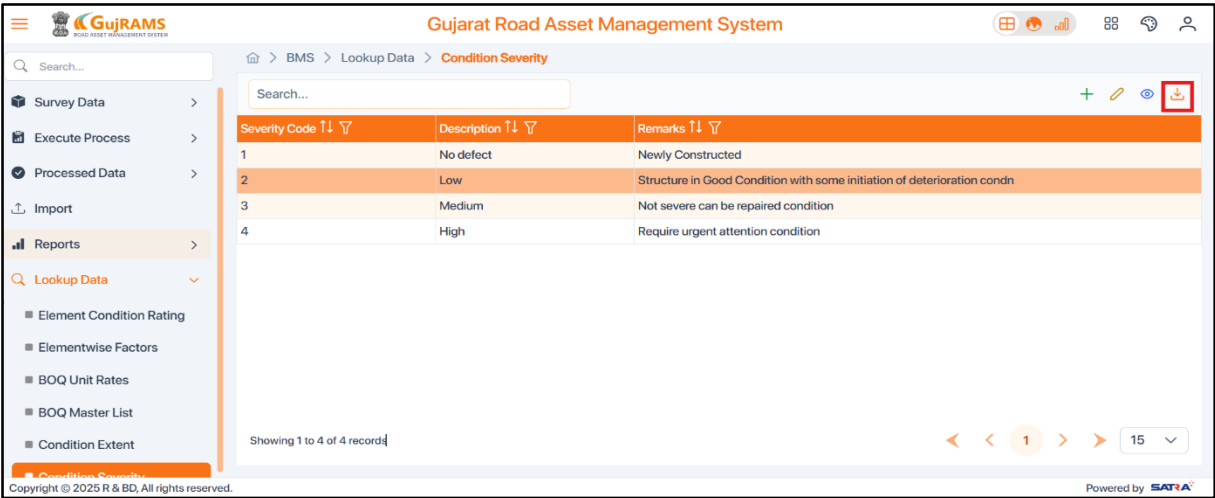

Figure 8-4: Lookup Data – Condition Severity Export lookup

Note: Refer [Annexure A](#) for all Lookup Data.

Annexure - A**Lookup Data**

1. Element Condition Rating

Cond Code	Grade	Excellent	Good	Fair	Poor	Total
A1	1	80	20	0	0	100
A2	2	80	20	0	0	100

E14	Protection works	Embankments	Batter Protection works	2.00	BMS.WallCondition	CondCode	True
-----	------------------	-------------	-------------------------	------	-------------------	----------	------

3. BOQ Unit rates

Year	Item Name	Description	Unit	Unit Rate	Circle
2019	B0001	Providing and laying stone pitching in slopes complete as per drawing and Technical Specifications Section 2500 of MORTH and as per relevant IRC specifications.	cumec	2660	RC2-P
2019	B0002	Providing and laying Launching apron around Abutments for protection against scour with stone boulders weighing not less than 40 kg each including all labour , materials, machinery, all leads and lifts, compacting to the satisfaction of the Engineer etc. complete as per drawing, Technical Specification Section 2500 .of MORTH and IRC:89-1989 and as directed by the Engineer.	cumec	2637	RC2-P
2019	B0003	Providing verticals at 1.50m c/c with two boxed horizontals as per approved drawings and specifications. Includes providing and applying two component pure epoxy 3:1 resin for anchoring reinforcement to concrete in pre drilled holes. The anchor grout used shall be approved as per EAD 330499-00-0601 for anchoring in cracked and un-cracked concrete with C1 and C2 seismic approval. The anchor used shall have compressive strength > 110 MPa, E Modulus of	m	7500	RC2-P

		10,800 MPa and fire rated up to 2 hours. The anchor gout shall be LEED compliant for VOC levels, etc. complete including shuttering, staging and other safety requirement during execution.			
2019	B0004	Masonry pointing.	sqm	500	RC2-P
2019	B0005	This Item shall include Removal of Loose concrete up to 20mm beyond reinforcement and saw cut the repair area in proper geometric shapes in order to avoid feather edging, also including treating the exposed reinforcement with alkaline rusted remover and then treating the steel with epoxy based zinc rich anti corrosive over the steel rebars. The zinc rich primer shall be applied 40 microns dry film thickness and shall have salt spray resistance of <5 mg for 96 hours as per ASTM B-117 and adhesive bond strength > 1.5 MPa as per ASTM D4541. Also including the application of bonding agent of solvent free epoxy based two component resin system. The bonding agent shall be applied by brush & should remain in tacky state after application for a minimum period of 5-6 hrs at 20 deg C & 2-3 hrs at 30 deg C. The product shall achieve 50 N/mm ² compressive strength, 20 N/mm ² tensile strength, 35 N/mm ² flexural strength and 10 N/mm ² shear strength as per BS 6319 standards. The adhesive bond to the concrete substrate shall exceed the tensile	Sqm	8412	RC2-P

		strength of the host concrete. Includes Applying dual shrinkage compensated fibre reinforced polymer modified repair mortar on the prepared surface and curing with water or curing compound. The repair mortar used shall have single component shall be mixed with water at water powder ratio of 0.16 and shall have drying shrinkage < 300 microstrain as per ASTM C 157-93; permeability < 5mm as per DIN 1048 Part 5 ; compressive strength > 70 MPa ; Flexural Strength > 9Mpa as per BS 6319 ; RCPT < 1800 Coulombs and Class A1 fire rating as per EN 1504-3 Cl 5.5. Also includes curing with water based curing compound. Water based curing compound shall be spray applied at coverage of 3.5 to 5 sqm/ litre and shall have water loss < 0.55 kg/sqm as per ASTM C 156 , reflectance > 60% and drying time < 4 hours, etc. complete including shuttering, staging and other safety requirement during execution.			
2019	B0006	Approach Slabs (concrete including reinforcement).	cumec	15000	RC2-P
2019	B0007	Cleaning of debris and Vegetation around bearings and along linear waterway.	sqm	500	RC2-P
2019	B0008	Providing and laying of a strip seal expansion joint catering to maximum horizontal movement up to 70 mm, complete as per approved	m	21010	RC2-P

		drawings and standard specifications to be installed by the manufacturer/supplier or their authorized representative ensuring compliance to the manufacturer's instructions for installation and as per relevant clauses of section 2600. Including removing the concrete at edges of deck slab at expansion joint location for about 300mm on either side, exposing all the reinforcements etc., complete. Treating the exposed reinforcement with alkaline rust remover and then treat the steel with epoxy based zinc rich anti corrosive over the steel rebars. The zinc rich primer shall be applied at 40 microns dry film thickness and shall have salt spray resistance of <5 mg for 96 hours as per ASTM B-117 and adhesive bond strength > 1.5 MPa as per ASTM D4541, etc., complete. Providing and applying bonding agent which shall be a solvent free epoxy based two component resin system The bonding agent shall be applied by brush & should remain in tacky state after application for a minimum period of 5-6 hrs at 20 deg C & 2-3 hrs at 30 deg C. The product shall achieve 50 N/mm² compressive strength, 20 N/mm² tensile strength, 35 N/mm² flexural strength and 10 N/mm² shear strength as per BS 6319 standards. The adhesive bond to the concrete substrate shall exceed the tensile strength of the host concrete, etc., complete. Providing and applying single component free flowing, non-shrink cementitious microconcrete used at water powder ratio of 0.16, having			
--	--	--	--	--	--

		mixed density of 2100 - 2200 kg/m ³ and unrestrained expansion of 1 to 4% as per ASTM C827. The microconcrete used shall achieve compressive strength of 50 Mpa at 28 days, Flexural Strength of 5 Mpa at 28, young's modulus of 25 kN/mm ² and shall be "Class A1" fire rating as per EN 1504 Cl 5.5, etc., complete including shuttering, staging and other safety requirement during execution.			
2019	B0009	Providing and erecting a "W" metal beam crash barrier comprising of 3 mm thick corrugated sheet metal beam rail, 70 cm above road/ground level, fixed on ISMC series channel vertical post, 150 x 75 x 5 mm spaced 2 m centre to centre, 1.8 m high, 1.1 m below ground/road level, all steel parts and fitments to be galvanised by hot dip process, all fittings to conform to IS:1367 and IS:1364, metal beam rail to be fixed on the vertical post with a spacer of channel section 150 x 75 x 5 mm, 330 mm long complete as per clause 810 including cost and conveyance of all materials, equipment, machinery, and labour with all leads and lifts, loading and unloading charges as directed by the engineer and approved drawings etc., complete for finished item of work.	m	2750	RC2-P

4. BOQ Master List

Item No.	Item Name	Item Description	Unit
1	B0001	Providing and laying stone pitching in slopes complete as per drawing and Technical Specifications Section 2500 of MORTH and as per relevant IRC specifications.	cumec
2	B0002	Providing and laying Launching apron around Abutments for protection against scour with stone boulders weighing not less than 40 kg each including all labour , materials, machinery, all leads and lifts, compacting to the satisfaction of the Engineer etc. complete as per drawing, Technical Specification Section 2500 of MORTH and IRC:89-1989 and as directed by the Engineer.	cumec
5	B0003	Providing verticals at 1.50m c/c with two boxed horizontals as per approved drawings and specifications. Includes providing and applying two component pure epoxy 3:1 resin for anchoring reinforcement to concrete in pre drilled holes. The anchor grout used shall be approved as per EAD 330499-00-0601 for anchoring in cracked and un-cracked concrete with C1 and C2 seismic approval. BCI Values:
100-80 : Retained with Routine Maintenance
80-65 : Minor Repairs Required
65-45 : Moderate Repairs Required
45-30 : Requires Strengthening / Rehabilitation
< 30 : Re-construction / New Construction
Widths : If D/W < 8.0m for Minor Bt. and <7.0m for Major Bt.
Rep. SS : If Super-structure BECI is less than 30%

BCI Calculation Procedure

Technical Framework for Bridge Condition Index (BCI) Calculation

1. Executive Overview of the BCI Methodology

The Bridge Condition Index (BCI) serves as the primary strategic metric within the Gujarat Road Asset Management System (GujRAMS) to quantify the structural and functional health of infrastructure assets. Moving beyond reactive maintenance—where interventions occur only after visible failure—the BCI framework enables a proactive, data-driven lifecycle management strategy. This systematic approach ensures that budgetary resources are prioritized for structures showing early signs of structural deficiency before degradation becomes cost-prohibitive. As defined in the BMS Overview, the index is built upon a baseline of physical attributes—including length, width, surface type, and terrain—integrated with real-time condition data. By aggregating individual structural deficiency indicators, the BCI provides a standardized health score that allows senior engineers to evaluate the entire bridge network through the BMS Dashboard. This transition from raw survey data to actionable analytics forms the foundation of modern infrastructure investment strategies.

2. Hierarchical Data Inputs: Elements and Importance Factors

To ensure high-fidelity assessment, a bridge must undergo hierarchical decomposition into specific sub-elements. Evaluating a bridge as a single unit is insufficient; precise asset management requires identifying the condition of specific components to determine if a low score is driven by surface-level wear or deep-seated load-path vulnerabilities. The following table details the "Main Elements" and "Components" utilized in the BCI calculation, along with their associated weights:

Main Element	Components	Importance Factor
Super-Structure	Deck (RC Solid Slab, RC Box, Masonry Arch, Girder Deck Slab)	4.00
	Beams (Longitudinal, Box, or Cross Girders)	5.00
Foundation and Sub-Structure	Abutment Walls and Abutment Caps	4.00
	Abutment Bearings	3.00
	Foundation Settlement and Scour	5.00
Piers	Pier Shafts and Pier Caps	4.00
	Pier Bearings	3.00
	Pier Foundation Settlement and Scour	5.00
Walls	Return / Wing / Retaining Walls	2.00
Deck Surface	Wearing Coat	2.00
	Expansion Joints	2.00
Barriers	Crash Barriers, Parapets, Hand Railing	1.00
Protection Works	Embankments (Batter Protection Works)	2.00

Engineering Prioritization Logic

The "Importance Factor" (ranging from 1.00 to 5.00) reflects the component's criticality to the structural load path. High-weight elements such as **Longitudinal Girders** and **Foundation Settlement** (5.00) represent "Global Failure" modes; a deficiency here threatens the entire structure's stability. Conversely, **Barriers** (1.00) are classified as non-structural appurtenances related to "Local/Safety Serviceability." By weighting girders five times more heavily than railings, the BCI ensures that the final score is an accurate reflection of structural risk rather than aesthetic condition.

3. The Condition Rating Scale: Quantifying Distress

To eliminate subjective bias during field inspections, the methodology employs a standardized rating scale. This ensures jurisdictional consistency, allowing a "Fair" rating in one division to carry the exact same engineering weight as in another. Each component is mapped to one of four condition states, assigned the following numerical multipliers:

- **Excellent:** 0.90 (90%)
- **Good:** 0.70 (70%)
- **Fair:** 0.45 (45%)
- **Poor:** 0.05 (5%)

Non-Linear Risk Escalation

The strategic significance of this scale lies in its non-linearity. The 25% drop in the multiplier when transitioning from "Good" (0.70) to "Fair" (0.45) is a deliberate mathematical trigger. This sharp decline is designed to significantly lower the BECI score, flagging the asset for "Moderate Repairs" before structural degradation accelerates into the "Poor" state (0.05), where rehabilitation costs often become non-viable.

4. Calculating the Bridge Element Condition Index (BECI)

The Bridge Element Condition Index (BECI) is a critical intermediate calculation that isolates specific failure points. By generating individual BECI scores for categories like the Super-Structure or Foundation, engineers can differentiate between assets requiring simple surface maintenance and those with compromised structural integrity.

Calculation Logic

The BECI is derived by applying the condition multipliers to the percentage of the element area (the "Unit" value) found in each state. The standard formula is: **BECI = $\sum (\text{Multiplier} \times \text{Unit Percentage}) \times \text{Age Factor}$**

- **Unit Value:** Represents the quantity or percentage of the element in a specific condition (e.g., 80% Excellent, 20% Good).
- **Age Factor:** Currently standardized at 1.00 in the GujRAMS framework. The final BCI is the ultimate weighted culmination of these individual category BECI values, providing a single representative health score for the entire asset.

5. Strategic Interpretation of BCI Scores and Maintenance Actions

BCI scores are the primary driver for budgetary prioritization and asset lifecycle management.

The system maps specific score ranges to required engineering interventions:

BCI Range	Maintenance Intervention
100 - 80	Retained with Routine Maintenance
80 - 65	Minor Repairs Required
65 - 45	Moderate Repairs Required
45 - 30	Strengthening / Rehabilitation Required
< 30	Re-construction / New Construction Required

Functional and Structural Thresholds

Beyond the aggregate score, the framework utilizes specific secondary triggers for asset management:

- **Replacement Trigger (Rep. SS):** If the **Super-structure BECI** falls below **30%** , the system automatically recommends the replacement of the entire super-structure, regardless of the condition of other elements.
- **Functional Widening Rule:** Regardless of structural health, widening is triggered if the Overall Width (OW) is **< 8.0m for Minor Bridges** or **< 7.0m for Major Bridges** .

6. Digital Workflow: Executing BCI via the GujRAMS BMS

The **Gujarat Road Asset Management System (GujRAMS)** automates these complex calculations, ensuring that raw field data is transformed into a prioritized investment plan through a standardized digital workflow.

Execution Process

1. **Inventory Data Entry:** Detailed attributes are recorded in the **Survey Data** module under specific sub-menus: **Abutment Details** , **Pier Details** , and **Super Structure Inventory & Condition** .
2. **Estimation:** The user navigates to the **Execute Process** menu and selects **Estimate BCI** .
3. **Data Processing:** GujRAMS applies the hierarchical weights and non-linear multipliers to the submitted survey percentages.
4. **Verification:** Final results are viewed in the **Processed Data > BCI** section, providing both the aggregate BCI and element-wise BECI.

Visualization and Jurisdictional Oversight

The **BMS Dashboard** provides high-level visualization of the network's health. It features a **Pie Chart** representing the "Bridge Condition Index Distribution" and a **Bar Graph** showing the "Number of Bridges by Type" (Major, Minor, or Culvert). Engineers can utilize the **Chart Filter** and **Print** icons to generate reports. Crucially, data can be filtered **Circle-wise** or **Division-wise** , providing administrators with the oversight necessary to distribute maintenance funds effectively across different jurisdictions.
